

## Injection-Molded Cone Piling Caps

This superior line of piling caps is offered in 14 sizes from 6" to 12-1/2" (in 1/2" increments), in both black and white. An injection-molded process using LLDPE Metallocene Based Polymer makes these caps superior in strength, flexibility, and dimensional consistency. The material contains mildew inhibitors and is UV stabilized. These piling caps will stand up to the harsh marine environment and keep birds from roosting, which will extend the life of pilings many years.

Other sizes and shapes of piling caps are available — ask for more information.

**ALSO AVAILABLE:** Fiberglass square cone piling caps, featured in our "Fiberglass Products" category.
